
Senior Python Backend Engineer

About the Role: We are looking for a Senior Backend Engineer to build and scale our core API services.**Responsibilities:**

- Design, develop, and maintain high-performance server-side applications using Python and Django/FastAPI.
- Architect and optimize PostgreSQL database schemas for high-traffic environments.
- Integrate third-party APIs and build microservices architectures.
- 4+ years of backend development experience using Python.
- Strong knowledge of SQL, ORM, and RESTful API design.
- Experience with Redis, Celery, and message queues (RabbitMQ/Kafka).

Requirements:
