Git: https://github.com/huzy179
Address: Hà Nội

OBJECTIVE

Full-stack Developer with hands-on experience in building web applications, backend systems, and AI-integrated solutions. In the next 1–2 years, I aim to further strengthen my full-stack and AI skills to solve practical business problems through scalable, user-focused software products. In the long term, I aspire to grow into a Product Manager role, bridging technical execution, user needs, and business strategy to deliver impactful digital solutions.

WORK EXPERIENCE

11/2025 - Present	**Martine Time Bank** **Full-stack Developer, AI Engineer**
04/2024 - 10/2025	**Haposoft** **Full-stack Developer, Data Analyst Developer**
09/2023 - 03/2024	**Remote project(Singapore)** **Full-stack Developer**
03/2023 - 08/2023	**Viettel Software** **Full-stack Developer**

EDUCATION

7/2024 - Present	**FPT UNIVERSITY** **Master of Software Engineering** Master's degree in Software Engineering— In progress
2020 - 2024	**FPT UNIVERSITY - GPA: 3.0/4.0** **SOFTWARE ENGINEERING** Graduated with a bachelor's degree in software engineering

SKILLS

Frontend	Angular, ReactJS, NextJS, VueJS
Backend	Node.js/NestJS, Java/Spring Boot, PHP/Laravel, Go, Python/FastAPI, Strapi
DevOps & Tools	Docker, Git, Redis, MinIO, MobaXterm, Microsoft Copilot Studio
Database	SQLServer, Mongo, MySQL, PostgreSQL, Snowflake
Data & Visualization	Tableau, Airflow, MLflow, Prometheus, Grafana
English	810 TOEIC

PROJECTS

11-2025 - Present

Martine Time Bank
Full-stack Developer, AI Engineer
-System Overview: Internal AI agent hub for MSB, centralizing AI agents built in-house and from platforms such as Microsoft Copilot Studio. The platform allows users to access, manage, and interact with multiple AI

agents through a unified web interface, supporting automation and business workflows within the bank.
-Technology: NextJS, Next.js API Routes, Microsoft Copilot Studio, PostgreSQL
-Responsibilities:
+Independently developed the full AI Agent Hub platform, including frontend, backend, database design
+Integrated internal AI agents and Microsoft Copilot Studio agents into a centralized web interface
+Built AI agents on Microsoft Copilot Studio to support internal banking workflows

03-2025 - 10-2025

Haposoft
Full-stack Developer, Data Analytics Developer
-System Overview: Data analytics and visualization platform using Tableau and Snowflake, enabling users to search, filter, and analyze large datasets through interactive dashboards.
-Technology: ReactJS, Golang, Snowflake, PostgreSQL, Tableau
-Responsibilities:
+Built the entire frontend with ReactJS and embedded Tableau dashboards using Tableau APIs
+Integrated Tableau dashboards for smooth and user-friendly visualization

11-2024 - 02-2025

Haposoft
Full-stack Developer
-System Overview: Sustainable e-commerce platform for recycled clothes, enabling user registration, profile management, and second-hand product listings to promote eco-friendly consumption.
-Technology: VueJS, Laravel, PostgreSQL
-Responsibilities:
+Developed APIs for product management, implemented authentication & authorization
+Built user profile management and image upload for products

04-2024 - 10-2024

Haposoft
Full-stack Developer
-System Overview: Digital platform connecting investors and startups for fundraising activities. Supports fundraising round creation, startup evaluation, and investor-startup collaboration.
-Technology: NestJS, NextJS, PostgreSQL
-Responsibilities:
+Developed: fundraising rounds, investor management, startup scoring system for investors
+Built multi-language email notifications with personalized content

09-2023 - 03-2024

Remote project
Full-stack Developer
-System Overview: Train scheduling management system for Singapore, enabling accurate creation, update, and monitoring of train schedules.
-Technology: ReactJS, NestJS, PostgreSQL
-Responsibilities:
+Developed and optimized APIs for train scheduling
+Implemented business logic for scheduling workflows and large dataset processing

06-2023 - 08-2023

Viettel Software
Full-stack Developer
-System Overview: Developer support platform for AI-based code analysis and optimization, enabling language detection, error detection, and optimization suggestions.
-Technology: Angular, Spring Boot, PostgreSQL
-Responsibilities:
+Developed core features: language detection, error analysis, code optimization
+Integrated AI to process multi-language code snippets

03-2023 - 05-2023

Viettel Software
Full-stack Developer
-System Overview: AI-powered online testing platform with question bank, test creation, score history, and analytics. Supports auto-generation of questions by domain, proficiency, and language.
-Technology: Angular, Spring Boot, PostgreSQL
-Responsibilities:
+Developed core features: question bank, test creation, score history management
+Integrated AI for diverse and high-quality question generation
