
Blockchain / Smart Contract Developer

About the Role: Innovate in the Web3 space by building decentralized applications (dApps).

Responsibilities:

- Write, test, and deploy secure smart contracts on the Ethereum or Polygon networks.
- Develop backend services to interact with blockchain nodes.
- Audit smart contracts for security vulnerabilities and optimize gas costs.

Requirements:

- Proven experience writing smart contracts using Solidity.
- Familiarity with Web3.js, Ethers.js, and development frameworks like Hardhat or Foundry.
- Deep understanding of blockchain fundamentals, cryptography, and DeFi protocols.
