## Data Scientist (Machine Learning)

**About the Role:** We need a data enthusiast to extract insights from complex datasets and build predictive models. **Responsibilities:**

- Perform exploratory data analysis (EDA) and build machine learning models for customer behavior prediction.
- Deploy natural language processing (NLP) and computer vision models into production.
- Collaborate with data engineers to build robust data pipelines. **Requirements:**
- Degree in Computer Science, Statistics, or Mathematics.
- Proficiency in Python, Pandas, Scikit-learn, and TensorFlow/PyTorch.
- Strong understanding of statistical modeling and A/B testing methodologies.
