
Cybersecurity Analyst

About the Role: Protect our company's networks, systems, and data from cyber threats and vulnerabilities. **Responsibilities:**

- Monitor network traffic for security breaches and investigate security incidents.
- Conduct vulnerability assessments and penetration testing on internal applications.
- Implement security protocols and firewalls to safeguard company assets.

Requirements:

- Experience with SIEM tools (Splunk, QRadar) and intrusion detection systems.
- Knowledge of OWASP Top 10 and network protocols (TCP/IP, DNS, HTTP).
- CompTIA Security+, CEH, or CISSP certifications are a plus.
